**Long Term Outcome of Patients with Penile Fracture Undergoing Delayed Repair**

Published On: March 21, 2017 | Pages: 032 - 036

Author(s): Rajendra B Nerli*, Vikas Sharma, Amit Mungarwadi, Nitin D Pingale, Ameya T Wagh, Siddharth M Sarnaik and Anvesh A

Introduction: Fracture of the penis is a rare urological emergency which occurs as a result of abrupt trauma to an erect penis. Immediate surgical repair is the standard of care and is superior to nonoperative management due to excellent long term outcomes. ...
Due to the lack of information, the pathogenesis of the death of Jesus of Nazareth is still widely debated. A univocal pathogenesis can be detected by the close comparison between what is reported in the Holy Bible (in particular the four Gospels and the prophetic passages of the Old Testament) and what can be observed on the Turin Shroud (TS). ...
